

REYNALD ACE PILPIL

AI / ML Engineer · Agentic LLM Systems · RAG Pipelines

0968 619 1930 | azepilpil139@gmail.com | Cavite, Philippines

Portfolio: reynaldace-portfolio.online | GitHub: github.com/aces-14 | Hugging Face: huggingface.co/acepilpil

EDUCATION

Technological University of the Philippines – Cavite

Bachelor of Engineering Technology, Major in Computer Engineering

CERTIFICATIONS

Google Data Analytics Professional Certificate • Coursera (Google) · [Verify](#)

July 2024

Introduction to LangGraph (Python) • LangChain Academy · [Verify](#)

May 2026

TECHNICAL SKILLS

Machine Learning & AI: Python, PyTorch, scikit-learn, XGBoost, NLP, OCR, Large Language Models (LLMs), Hugging Face Transformers, sentence-transformers, NumPy, pandas

LLM & Agentic Systems: LangChain, LangGraph, RAG (Retrieval-Augmented Generation), Multi-Agent Orchestration, Prompt Engineering, Vector Databases (ChromaDB), LangSmith

MLOps & Deployment: FastAPI, Docker, REST API Design, Hugging Face Spaces, Gradio, Streamlit, Deployment, GitHub Actions

Backend & Data: Django, Flask, MySQL, SQL, JavaScript (ES6+), React, Vite, Tailwind CSS, data pipelines

Tools & Practices: Git/GitHub, Version Control, Agile, Code Review, Testing, Debugging

EXPERIENCE

Technical Sales Intern • 3E HITECH SOLUTIONS, INC.

January 2026 – May 2026

- Supported pre-sales activities for the company's solutions, focusing on projects with the National Grid Corporation of the Philippines (NGCP) — contributing to proposal preparation, scoping, and technical clarifications with stakeholders
- Assisted project management across NGCP deployments — coordinating timelines, tracking deliverables, and supporting communication between technical teams and clients

KEY AI / MACHINE LEARNING PROJECTS

HireMap PH *Philippine Job Market Analytics Platform*

Tech: Python, React, Vite, Tailwind CSS, GitHub Actions, web scraping, data pipelines ·

Live: [GitHub](#) · [Live](#) · [Blog](#)

- Built a full-stack job-market analytics platform that aggregates Philippine tech job listings daily via automated GitHub Actions pipelines, surfacing demand trends across roles, skills, and locations in a live dashboard.
- Engineered the end-to-end data pipeline from scraping and normalization to frontend rendering; built the React + Vite + Tailwind CSS dashboard to display structured job market insights, updated automatically each day.

Sentinel PH *Multi-Agent Dengue Intelligence Platform*

Tech: Python, LangChain, LangGraph, Groq (Llama 3.3 70B), XGBoost, RAG, ChromaDB, Streamlit ·

Live: [GitHub](#) · [Demo](#) · [Blog](#)

- Built a public dengue intelligence platform for the Philippines that fuses five data sources — surveillance records, weather, news, and search trends — into a unified pipeline, producing weekly risk briefings and a risk score across all 17 Philippine regions.

- Orchestrated a 4-node multi-agent LangGraph workflow with a citation-enforced RAG layer over Philippine dengue research and DOH guidelines; trained an XGBoost risk model that outperforms ARIMA and naive baselines by 40%, deployed as a live Streamlit dashboard.

Market Intelligence Agent *Stateful Multi-Agent System with Self-Revision*

Tech: Python, LangGraph, LangChain, Groq (Llama 3.3 70B), Tavily Search API, Pydantic v2, Gradio, LangSmith ·

Live: [HF Space](#) · [GitHub](#)

- Built an autonomous research agent with a **self-evaluating revision loop** using LangGraph — agent critiques its own draft, scores it, and re-searches targeted gaps until quality threshold is met, demonstrating stateful multi-node orchestration beyond simple LLM chaining
- Researches a company across four parallel angles (overview, news, competitors, market trends) via live web search and synthesizes the results into a structured intelligence report delivered as a Word document

Job Application Assistant Agent *Autonomous Multi-Step LLM Agent*

Tech: Python, Groq (Llama 3.3 70B), Tavily Search API, Pydantic v2, Gradio, python-docx ·

Live: [HF Space](#) · [GitHub](#)

- Built a 9-step agent with **integrity enforcement** — architecturally prohibited from fabricating resume content; a post-tailoring diff check flags violations, with every change logged in a fully auditable changelog (reason + confidence score)
- Handles the full pipeline: resume parsing, JD scoring, live company research via web search, and delivery of an ATS-tailored resume, cover letter, and LinkedIn outreach as downloadable Word documents in under 30 seconds

CodeLens *RAG-Powered Code Intelligence Tool*

Tech: Python, LangChain, ChromaDB, Groq (Llama 3.3 70B), sentence-transformers, Gradio ·

Live: [HF Space](#) · [Blog](#) · [GitHub](#)

- Built a tool that lets users point at any public GitHub repository and chat with its codebase in natural language — scraping and chunking files, embedding into a vector store, and returning answers with source file citations.
- Supports multi-turn conversations where follow-up questions resolve context correctly; handles edge cases like private repos, rate limits, and oversized codebases gracefully; deployed on Hugging Face Spaces.

Philippine Labor Law RAG Assistant *End-to-End Retrieval-Augmented Generation*

Tech: Python, LangChain, ChromaDB, Hugging Face Transformers, Flan-T5, sentence-transformers (all-MiniLM-L6-v2), Gradio ·

Live: [HF Space](#) · [Colab](#)

- Designed and deployed an end-to-end RAG pipeline over the Philippine Labor Code — document ingestion, semantic chunking, vector embeddings (all-MiniLM-L6-v2), ChromaDB retrieval, and Flan-T5 generation
- Returns natural-language answers (leave entitlements, overtime rules, termination procedures) with source citations grounded in the actual law, reducing hallucination through retrieval-first design

Financial Document Intelligence API *Production REST API*

Tech: Python, FastAPI, pdfplumber, pandas, Docker, Railway ·

Live: [HF Space](#) · [GitHub](#) · [API Docs](#)

- Production-grade REST API that ingests bank statement PDFs and returns structured JSON — extracted transactions, auto-categorized spending, computed financial summaries (income, expenses, savings rate), anomaly flags, and actionable insights
- Containerized with Docker and deployed to Railway with auto-generated Swagger / OpenAPI docs, demonstrating end-to-end fintech-relevant deployment
